

Stronger Together: Improving the Health of Montanans

As we move into the fourth quarter, one of our key priorities at Rocky Mountain Health Network continues to strengthen physician engagement and improve outcomes through our value-based care programs, including Medicare Advantage value-based rewards. Value-based care is more than reimbursement. It is about working together to improve patient outcomes, strengthen care coordination, and create a better healthcare experience for the communities we serve.

Physician alignment is at the heart of this effort. By focusing on preventive care, chronic disease management, annual wellness visits, and closing gaps in care, we can make a meaningful difference in the health of our patients.

As we approach year-end, I encourage every member to remain engaged and take advantage of opportunities to improve patient care and quality outcomes. Rocky Mountain Health Network remains committed to supporting these efforts through meaningful data, resources, and collaboration.

Our success is not measured simply by participation or financial performance, but by healthier patients, better outcomes.

Our strength lies in our shared commitment to delivering exceptional care. By working together, we can drive meaningful improvements in patient outcomes, strengthen our network, and make a lasting impact on the health and well-being of Montanans.
